Instructions for Annotator A (500 items, verify)

Thank you for helping. You will check romanized Kannada written by an AI model (Gemini): is each version fine, or wrong? If it is wrong, you type a fix. This file replaces the one sent earlier; please use only this one.

What you need: `annotator_A.xlsx` and Excel (laptop or desktop if you can; the Excel phone app also works).

First: the 3 examples (reply within a day)

At the top of the sheet **items** there are 3 shaded rows marked EXAMPLE (not among your items): one "fine", one "wrong" with a fix, and one "wrong" because the meaning changed. Look at them and reply to Aarnav "examples ok", or send your corrections, within a day. Then start the items.

Before you start

- Turn off AutoCorrect in Excel: File > Options > Proofing > AutoCorrect Options, and untick "Correct TWo INitial CApitals", "Capitalize first letter of sentences" and "Replace text as you type".
- On a phone or tablet, also turn off autocorrect and automatic capitals in your keyboard settings.

For each item (one row per item)

You see the Kannada sentence, its English translation and two Gemini versions:

- **Gemini natural:** the Kannada typed in English letters, word for word, the way people type on a phone.
- **Gemini Kanglish:** how a young person in Bengaluru would write the same message on WhatsApp, with English words mixed in where that is natural.

For each of the two versions:

1. In **OK?** choose **fine** if it is how people would type it on WhatsApp and it keeps the meaning.
2. Otherwise choose **wrong** and type your fix in **fix**: the whole sentence the way it should be.
3. Leave **fix** empty when the version is fine. Do not change a version just to match your own spelling: there is no single correct spelling.

Only the yellow cells can be changed. Use **Note** for anything odd (for example, a Kannada sentence that is itself wrong).

Rules

- No AI or translation tools, and no dictionaries.
- Do not discuss the items with anyone else working on this project.

Pace and sending your work

- About 20 seconds per item, about 3 hours in total. Short sessions are fine: save (Ctrl+S) and close.
- Always save as an Excel Workbook (.xlsx), never as CSV.
- Send the .xlsx file to Aarnav on WhatsApp (as a Document) every week.
